

Product Catalog Website

Complete Guide and User Manual

WIDER UNIVERSAL TRADING COMPANY · Riyadh, Saudi Arabia

Version 1.0 · 17 October 2026

How to use this guide

This guide is written for everyone at Wider Universal, including people who are not technical.

If you are...	Read
Anyone who wants a quick overview	Part 1: What we have built
Sales staff, or anyone helping customers	Part 2: Using the public website
A person who manages prices, products or website content	Part 3: Admin manual (step by step)
A manager	Part 4 (Safety and security) and Part 6 (Current status)
Looking for a quick answer	Part 7: Questions and problems

Words in **bold** are the exact names of buttons, menus or pages you will see on screen.

Part 1: What we have built

We have built our own **online product catalog and price list** for Wider Universal. It has two sides.

1. The public website (anyone can open it):

- About **1,291 products** from 11 brands, including Dahua, Ajax, Imou, YLI, Fyber, ITC, Legrand, NJOY and STARLINK.
- Prices in **Saudi Riyals (SAR)**. These are Wider Universal's own selling prices.
- Search, brand filters and category filters.
- A **Quote list**: customers pick products and quantities, then send the list to one of our branches by WhatsApp or email.
- A **downloadable PDF price list** carrying our logo and contact details.
- A **Contact page** with our three branches.
- Green **price-drop tags** when we lower a price.
- It works on phones, tablets, laptops and large monitors.

2. The admin area (only for authorised staff):

- Change prices, offers and stock.
- Add, edit or hide products.
- Update many products at once from an Excel spreadsheet. A whole import can be undone.
- Create PDF price lists.
- Edit the logo, website texts, header, footer, contacts and page layout.
- See a full history of every price change and settings change, with who made it and when.

Changes made in the admin area appear on the website **straight away**. No programmer is needed for everyday work.

Main features at a glance

Feature	What it does
Product catalog	All products grouped by category, with search and filters
Brand spotlight	A banner at the top changes to match the brand being viewed
Product details	Click any product to see its picture, specifications, datasheet and price
Offers	Special prices with start and end dates
Price-drop tags	Shows "PRICE ↓ 8%" for 30 days after we lower a price
Quote list	Customers build a list and send it to a branch
PDF price list	Customers and staff can download a branded price list
Contact page	The three branches with Call and Email buttons
Wide-screen layout	On big monitors: filters on the left, products in the middle, quote list on the right
Admin dashboard	Manage everything without touching code
History	Every price and settings change is recorded and cannot be deleted

Part 2: Using the public website

2.1 The home page (catalog)

The home page is the catalog. From top to bottom:

1. **Header:** our logo, the menu (Catalog, Offers, Contact, **Quote list**) and a **Main Website** button. The Main Website button opens wideruniversal.com in a new tab.
2. **Brand spotlight:** a large banner with a title and pictures. It also shows "Live price list · updated *date*", the date prices were last updated.
3. **Search box:** type a model number, product code or name, for example `IPC-HDW2841` or `intercom`.
4. **Brand buttons ("chips"):** click a brand to see only its products. Each button shows how many products that brand has. There are also **Offers** and **Price drops** buttons.
5. **Category, Sort and In stock filters**, to narrow the list further. Click **Reset** to clear all filters.
6. **Product list:** products grouped by category. Each category shows 8 products at first; click **Show all** to see the rest.

2.2 Looking at a product

- **Click any product row.** It opens in place and shows:
  - a larger picture;
  - key specifications;
  - a datasheet link, when one is available;
  - the price, a quantity box, **Add to quote list** and **Enquire on WhatsApp**.
- To see everything about a product on its own page, click the link to the full product page. You can share that page's address with a customer.

What the labels mean

Label	Meaning
SAR 1,250	Our selling price
Price shown with an older price crossed out, plus an **OFFER** label	A special offer is running
Green **PRICE ↓ 8%** tag	We lowered this price within the last 30 days. The old price is shown crossed out.
Price on request	No price is published. The customer should contact us.
In stock / Low stock / Out of stock / On request	Availability. Admin can hide this if wanted.

2.3 The quote list (for customers)

The quote list works like a shopping basket, but no payment is taken. It is a **request for a quotation**.

1. Open a product and choose a quantity.
2. Click **Add to quote list**. A small counter appears next to **Quote list** in the header.
3. When finished, click **Quote list** in the header, or the bar at the bottom of the screen.
4. On the quote page you can:
   - change quantities or remove items;
   - see the total. Items without a price are marked "on request";
   - **choose a branch and a contact person**;
   - optionally add your name, company, phone and notes.
5. Send the request using one of these buttons:
   - **Send on WhatsApp** opens WhatsApp with the full list ready to send to that salesperson.
   - **Send by email** opens the email app with the list filled in.
   - **Copy request text** copies the list so it can be pasted anywhere.

> **Good to know:** the quote list is saved only on the customer's own phone or computer. Nothing is sent to us until the customer presses WhatsApp or email.

2.4 Downloading the PDF price list

In the search area, click **Download price list (PDF)**. You can download:

- the price list for the **brand you are viewing**, or
- the price list for **all brands**.

The PDF includes our logo, company name, website, contact details and page numbers.

2.5 Contact page

Click **Contact** in the menu. Each branch card has **Call** and **Email** buttons.

Branch	Contact	Phone	Email
Jeddah	Rauf	+966 51 121 1028	Salesjeddah@wideruniversal.com
Al Khobar	Sulthan	+966 55 882 9335	Saleskhobar@wideruniversal.com
Riyadh	Savan Abdulla	+966 56 332 6309	abdulla@theuniversalgrp.com

Main office: Riyadh · +966 55 482 2231 · sales@theuniversaltrading.com

2.6 Phones, tablets and big screens

- **Phones and tablets:** the menu folds into a ☰ button and the list fits the screen.
- **Large monitors:** the website can use a **wide layout** with three columns:
  - filters on the left;
  - products in the middle, each with a quick **+ Add to quote** button;
  - the quote list on the right.

- If the admin has allowed it, visitors on large screens also see a **Layout: Wide | Standard** switch. Their choice is remembered on their own computer.

Part 3: Admin manual (step by step)

3.1 Signing in

1. Go to the website address followed by **/admin**. For example: `https://<our-website>/admin`. There is no admin link on the public website. This is deliberate, for security.
2. Enter your **email** and **password**, then click **Sign in**.
3. If you forgot your password, click **Forgot password?** and follow the email.

Rules for admin accounts:

- There is no "Sign up" page. Admin accounts are created only by the system owner (see section 3.13).
- You are **signed out automatically** after **30 minutes of no activity**, and when you close the browser.
- If someone's admin access is removed, they lose access within about 10 minutes, even if they are still signed in.

The admin menu (left side):

Menu item	What it is for
Dashboard	Summary numbers and quick actions
Products	Find, edit, publish or hide products; change prices, offers and stock
Brands & categories	Brand names, order, and brand spotlight banners
Import / export	Update many products at once with Excel
PDF price list	Create a price list PDF
Audit history	Every price, offer and stock change
Contacts	Branches and salespeople on the Contact page
Website settings	Logo, texts, header, footer, layout, PDF design
View public site ↗	Opens the public website in a new tab
Sign out	Ends your session

3.2 Dashboard

The dashboard shows counts:

- active products;
- in stock, low stock and out of stock;
- draft and archived products;
- products on offer (**Promotional products**);
- products **without a selling price**;
- products with **missing important information**.

Click a number to open the matching product list. Under **Quick actions** you can jump to common tasks.

3.3 Finding and editing a product

1. Click **Products**.
2. Type in the search box, or use the filters (brand, category, status, stock, offers, "Price-drop tag showing").
3. Click a product to open it.
4. Change what you need:
   - **Name, model, SKU (product code), brand, category**
   - **Description, specifications, key features**
   - **Price (SAR)** and **Offer price** with start and end dates
   - **Stock status** and quantity
   - **Picture** (upload) and **datasheet link**
   - **Visibility** (see the table below)
5. Click **Save**.

Visibility	Meaning
Published	Shown on the public website
Draft	Hidden. Use this for products still being prepared.
Archived	Hidden and set aside, for example discontinued products

Changing a price

- Open the product, type the new price and click **Save**. It appears on the website immediately.
- If the new price is **lower**, the website shows a green **PRICE ↓ %** tag for 30 days. The editor tells you this before you save.
- To remove a price-drop tag early, click **Remove tag** on the product page.
- Every price change is recorded in **Audit history**.

Running an offer

- Enter an **Offer price**. It must be lower than the normal price.
- Choose the **start** and **end** dates, then save.
- The offer shows automatically between those dates and stops by itself afterwards.

Changing many products at once (bulk actions)

In **Products**, tick the boxes next to several products. You can then:

- publish, unpublish or archive them;
- set their stock;
- clear their offers;
- export them to a spreadsheet.

Adding a new product

Click **Products** → **Add product**, fill in the details and save. Set it to **Published** when it is ready.

3.4 Brands, categories and the brand spotlight

Go to **Brands & categories**. There you can:

- add or rename brands and categories. A rename updates every product automatically;
- **change the order** brands appear in on the website;
- delete brands or categories that no product uses.

Brand spotlight (the banner at the top of the website):

- For each brand you can set a **headline**, a **subtitle** and a **banner picture**.
- Banner pictures must be PNG, JPEG or WebP, at least 600 pixels wide and no bigger than 5 MB.
- When a visitor clicks that brand, the top banner changes to match.
- A new brand gets a spotlight automatically. Adding a headline and banner just makes it look better.

3.5 Updating many prices with Excel (Import / export)

Use this when many prices or stock levels change at once.

1. Go to **Import / export**.
2. **Step 1: Template.** Click **Download template (Excel)**, or use **Export catalog** to download all current products in the same format.
3. Edit the file in Excel. The main columns are: `sku, name, brand, model, category, subcategory, description, specifications, price_sar, offer_price_sar, stock_status, stock_quantity, image_url, source_url, datasheet_url, active`
4. **Step 2: Upload and preview.** Upload the file. The system shows a **preview** of exactly what will change, before anything is saved.
5. Check the preview, then confirm.

Helpful rules:

- Products are matched by **SKU** (product code).
- **Empty cells are left unchanged.** You only need to fill in what you want to change.
- Rows with problems, such as a duplicate SKU, are rejected and listed. The other rows still import.
- Every import appears in **Import history**. If something went wrong, click **Revert** on that import to undo it completely.

3.6 Creating a PDF price list

1. Go to **PDF price list**.
2. Choose:
   - a **title**;
   - whether to **include availability** (stock);
   - whether to **include key features** (up to 4 lines);

    - **which brands and categories**. Leave everything unticked to include all.
3. Click **Generate PDF**. The file downloads.

The logo, colours, footer text and contact details on the PDF are set in **Website settings** → **PDF branding**.

3.7 Audit history

Audit history lists every change to price, offer, offer dates, stock status and quantity:

- who made it;
- when;
- the old value and the new value.

This history **cannot be edited or deleted** by anyone, including admins. Changes to website settings and contacts are recorded too, in **Website settings** → **Change history**.

3.8 Managing contacts

Go to **Contacts**.

- **Branches:** add, rename, add a location, show or hide, change the order, or delete.
- **People:** add several people to a branch, each with a name, role (optional), phone and email.
- Phone numbers and emails are checked as you type. You cannot publish a wrong format.
- Click **Save and publish** to update the Contact page and the quote list branch choices. Click **Cancel** to throw away your changes.

> The **branches and people here are also the choices customers see on the Quote list page**. Keep them up to date.

3.9 Website settings

Go to **Website settings**. It has these tabs:

Tab	What you can change
Company branding	Company name, tagline, description, main website address, logo upload
Header	Which buttons show, their labels, menu links
Footer	Footer text, links, brand links, copyright, social media links
Page content	Home page title and text, catalog introduction, "About" section, stock display, **page layout**
Contact information	Main phone, WhatsApp number, email, address
PDF branding	Logo on/off, PDF title, tagline, contact and website on/off, footer text, sample PDF

Tab	What you can change
Change history	Who changed what and when; you can reload an older version
Security & access	The list of admins and security advice

How saving works:

- A preview of the header and footer updates as you type.
- Click **Save and publish** to make changes live. No programmer or redeploy is needed.
- If something is wrong, for example a website address without `https://`, the field turns red and publishing is blocked. The website keeps the last good version.
- **Restore defaults** loads the original settings into the editor. They do not go live until you click Save and publish.
- If you leave the page with unsaved changes, it warns you first.

Choosing the page layout (Page content tab)

Under **Catalog layout on wide screens**:

Setting	Choices
Layout	**Automatic**: big screens get the three-column wide layout. **Standard everywhere**: the classic centred layout on every screen.
Use the wide layout on screens at least…	1,440 px (large laptops), **1,600 px (recommended)**, or 1,920 px (full-HD monitors)
Let visitors switch between Wide and Standard	When on, visitors with big screens get a small switch to choose for themselves

Phones and tablets always use the standard layout.

3.10 Common tasks: quick recipes

I want to…	Do this
Change one price	**Products** → search → open → change **Price** → **Save**
Put a product on offer	Open the product → **Offer price** + dates → **Save**
Mark a product out of stock	Open the product → **Stock status: Out of stock** → **Save**
Hide a product	Open the product → **Visibility: Draft** or **Archived** → **Save**
Update 200 prices	**Import / export** → **Export catalog** → edit `price_sar` in Excel → upload → check preview → confirm
Undo a bad import	**Import / export** → **Import history** → **Revert**

I want to…	Do this
Change a salesperson's phone	**Contacts** → edit → **Save and publish**
Change the home page title	**Website settings** → **Page content** → **Save and publish**
Change the logo	**Website settings** → **Company branding** → upload (PNG/JPEG/WebP, max 2 MB) → **Save and publish**
See who changed a price	**Audit history**
Make a price list for one brand	**PDF price list** → tick the brand → **Generate PDF**

3.11 Things that need a technical person (rare)

These are **not** done from the admin pages, for safety:

- adding or removing an admin account;
- big design changes, or new features;
- re-running the full product extraction or a PDF price import from supplier files.

3.12 Ending your session

Click **Sign out** when you finish, especially on a shared computer.

3.13 Adding or removing an admin (for the system owner)

Admin rights can only be given or removed by the system owner, using a secure command on their computer. The steps are in **DEPLOYMENT.md, Part F**. Removed admins lose access within about 10 minutes.

Part 4: Safety and security (plain-language summary)

Question	Answer
Can a visitor change prices?	**No.** Only signed-in admins can change anything. The database itself enforces this, not just the website.
Can someone make themselves an admin?	**No.** There is no sign-up page. Admin rights are given only by the system owner.
Can prices change automatically, or by an outside company?	**No.** There is no automatic price feed and no third-party access. Prices change only when an admin saves them, or imports a spreadsheet that the admin reviews first.
Can someone change a price secretly?	**No.** Every price, offer and stock change is recorded with the person's name and the time, and the record cannot be deleted.
Can a price-drop tag be faked?	**No.** The system only shows a tag when the price was really lowered.
Are supplier (source) prices shown to the public?	**No.** Reference prices are stored separately and only admins can see them. The website and PDFs show only Wider Universal prices.
What if someone leaves a computer signed in?	They are signed out after 30 minutes of no activity, and when the browser closes.
Is the website secure (https)?	Yes. Firebase Hosting always uses **https** (the padlock), including with our own domain.
What if a wrong setting is entered?	It is blocked before publishing. A damaged setting falls back to safe defaults, so the website never breaks.

Good habits for admins:

- Use a strong password that you use only for this website.
- Never share your account. Each person should have their own.
- Sign out on shared computers.
- Check **Audit history** from time to time.

Part 5: What has been developed (project history)

Stage	What was done
1. Product data	All **1,291 products** were collected from the public reference catalog: names, models, specifications, pictures and datasheets. Reference prices are kept separately, private and for admins only.
2. Website and admin	The public catalog, product pages, admin dashboard, Excel import/export with undo, PDF price list, audit history, security rules and automatic tests.
3. Price import	Our prices were read from **11 supplier PDF price lists (69 pages)** and published as Wider Universal prices. All 1,291 rows were read; 16 difficult rows were checked by hand.
4. Branding	The official logo, the "WIDER UNIVERSAL" font in the header, editable website texts, branded PDFs, and stronger admin security (automatic sign-out, faster access removal).
5. Contacts	The Contact page with the three branches, the Contacts editor in admin, and a **Main Website** button in the header.
6. New design	The brand spotlight banner, product rows that open in place, and the **Quote list** with WhatsApp and email sending.
7. Price-drop tags	Automatic **PRICE ↓ %** tags for 30 days after a price reduction, plus a "Price drops" filter.
8. Wide layout	A three-column layout for large monitors, with filters, products and the quote list side by side.
9. Layout settings	Admin choice of Automatic or Standard layout, the wide-screen size, and an optional visitor switch.

Testing: every stage was checked with automatic tests:

- 52 website tests;
- 44 security tests;
- 5 data tests.

Each stage was also checked by hand in a browser on phone, tablet and desktop sizes. All tests pass.

Backups: before each major change, a copy of the previous version was saved in the `backups` folder.

Part 6: Current status and next steps

Item	Status
Website and admin area	**Finished and tested** on a private test copy on our computer
Live on the internet	**Not yet.** Waiting for a Firebase account and project to be created.
Costs	Firebase's free plan covers a catalog of this size with normal visitor numbers. Paid use starts only with very high traffic or storage. Firebase can set a budget alert.
Custom domain (for example, prices.wideruniversal.com)	Optional, after going live

To go live (full details in **DEPLOYMENT.md**):

1. The company owner creates a Firebase project with a company Google account (about 20 minutes).
2. That account is connected on this computer.
3. The website, security rules and product data are uploaded.
4. The first admin account is created.
5. The test site is reviewed, then published to the real address.

Part 7: Questions and problems

I changed a price but the website still shows the old one. Refresh the page (press F5, or pull down on a phone). Changes are live immediately, but an open page does not reload itself.

A product shows "Price on request". It has no price yet. Open it in **Products** and enter a price.

A product is missing from the website. Check its **Visibility**. It must be **Published**. Also check that it isn't filtered out by a brand, category or "In stock" filter on the website.

I was signed out. This happens after 30 minutes of no activity, or when the browser closes. Sign in again; saved work is not lost.

"Save and publish" is greyed out or shows red fields. A field has a problem, such as a wrong email format or a missing `https://`. Fix the red fields and try again.

An Excel import went wrong. Go to **Import / export** → **Import history** and click **Revert** on that import.

A customer says the quote list disappeared. The list is stored only in the customer's own browser. It is lost if they clear their browser data, or if they use a different phone or computer.

I can't see the Layout switch on the website. It appears only when Layout is **Automatic**, the visitor switch is turned on, and the screen is wide enough.

Glossary

Word	Meaning
Admin	A staff member allowed to make changes
Catalog	The list of all our products on the website
SKU	The product code we use to identify each product
Published / Draft / Archived	Shown on the website / hidden while being prepared / hidden and set aside
Offer	A temporary special price with start and end dates
Price-drop tag	A green label shown for 30 days after we lower a price
Quote list	A customer's list of products and quantities sent to us for a quotation
Import / Export	Uploading changes from Excel / downloading products to Excel
Revert	Undo a whole import
Audit history	The permanent record of who changed what and when
Firebase	Google's service that hosts our website and stores its data
Deploy / go live	Putting the website on the internet for everyone
px (pixels)	Screen width. 1,600 px is a typical desktop monitor.

Appendix: technical documents (for developers)

These files in the project folder contain the technical details:

File	Contents
`README.md`	Technical overview and setup
`DEPLOYMENT.md`	Step-by-step guide to going live
`TEST_REPORT.md`	Test results
`PDF_PRICE_IMPORT_GUIDE.md`	How to import prices from supplier PDFs again
`BRANDING_AND_SECURITY_CHANGES.md`	Logo, settings and security changes
`CONTACT_PAGE_CHANGES.md`	Contact page and header changes
`CATALOG_REDESIGN_CHANGES.md`	New design, quote list, price-drop tags and layouts
